                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a purified thermostable DNA ligase isolated from a hyperthermophilic marine archaebacterium, Pyrococcus furiosus (Pfu). The Pfu DNA ligase catalyese template dependent ligation at temperatures of about 30-80 deg.C. and substantially retains its catalytic ability when subjected to temperatures of 85-100 deg.C. It has an estimated mol. wt. of 50-70 kba. (Updated on 25-MAR-2003 to correct PF

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression confiction of the nucleic acid inhibits prodiferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense conclete acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable (6) inhibiting cellular containing the polypeptide; (6) an isolated containing the polypeptide; (7) an isolated containing the polypeptide; (8) an isolated station; (9) the polypeptide; (8) inhibiting cellular containing the polypeptide; (8) inhibiting cellular proliferation or that that an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation; (8) cidentifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts provide the compound that inhibits proliferation of an organism; or (11) identifying the target of a compound that inhibits the extent to which each of the strains is present in a culture or collection of containing the carget provide activity in the target of a compound that inhibits the extent contains of the proliferation in cells other than S. aureus, S. typhimurium, required for proliferation in cells other than S. aureus, S. typhimurium, contained in electronic format directly from WIPO at the contained of the strained specification, but was obtained contained in t

                                                                                                                                                                                                                                                                                                                                                                                     The invention describes a recombinant DNA construct comprising a collection of a sequence encoding an amino acid sequence available in electronic form from the US patent office at electronic form from the US patent office at collection of the invention are also useful in physical arrays of molecules and as collecting plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme communic conditions, pathogens or pests, for manipulating growth rate in colls by modification of the cell cycle pathway, for conferring conformation in plants, for improving yeal actomannan, compliant cells by modification of the cell cycle pathway, for conferring conformation in plants, for improving yield by modification of composition of plants growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of conformation or plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert content. This is the amino acid sequence of a plant full length insert protein yield and/or prot

CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide CC of the invention are also useful in physical arrays of molecules and as color plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme common conditions, pathogens or pests, for manipulating growth rate in CC plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, CC ilgnin or plant growth regulators, for increasing the rate of homologous creombination in plants, for improving yield by modification of construct of the photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake CC or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the

                                                                                                                                                                                                          protein, a hybridoma cell line which produces the isolated antibody, a method for determining a S. mansoni infection in a subject and a computer readable medium having recorded in it a nucleic acid molecule from S. mansoni genome. The nucleic acid molecule is useful for preventing, diagnosing, or treating S. mansoni infection (schistosomiasis). It can also be used as vaccine against S. mansoni. The present sequence is a Schistosoma mansoni protein of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/jublished_pot_sequences. Also, SEQ ID 2141-2152 are mentioned in the specification but are not included in the sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecule encoding a Schistosoma mansoni protein, useful for as a vaccine or for preventing, diagnosing, or treating Schistosoma mansoni infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Schistosoma mansoni.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Schistosomacide; schistosomiasis; psychiatric disorder; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S. mansoni
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid molecule encoding a Schistosoma mansoni protein, or its portion which is at least 20 amino acids in length. Also included are an expression vector comprising the nucleic acid operably linked to a promoter, a recombinant cell transformed/transfected with the nucleic acid (or expression vector), a recombination vector).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   02-JUN-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ADY65680

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to Pseudomonas aeruginosa polypeptides and the CC polynucleotides encoding them. The sequences are useful in diagnostics, therapy of pathological conditions, as molecular targets for diagnostics, CC prophylaxis and treatment of pathological conditions resulting from a conditions resulting from a condition of the ability to bind a P. aeruginosa nucleic acid, as components of CC for the ability to bind a P. aeruginosa nucleic acid, as components of CC including anti-P. aeruginosa drugs, as targets for antibacterial drugs, conduction of P. aeruginosa-derived peptides or polypeptides, as target components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa-caused components for diagnosis and/or treatment of P. aeruginosa sequences or other sequences of Pseudomonas species using biochip technology. Sequences ABO67826-CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed conspection of the patent of the printed conspection of the prin

Pseudomonas putida.

Antisense; prokaryotic essential gene; cell proliferation; drug design.

```
cc the 513 antisense squences given in the specification where expression cc (1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid cencoding a polypeptide whose expression is inhibited by the antisense cc nucleic acid; (2) a host cell containing the vector; (3) an isolated copolypeptide or its fragment whose expression is inhibited by the antisense cc proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an occompound that inhibits proliferation of an organism. The antisense nucleic acids are useful for strains; or (11) identifying the target of a compound that inhibits the compound that inhibits reduced to the target prokaryoti
